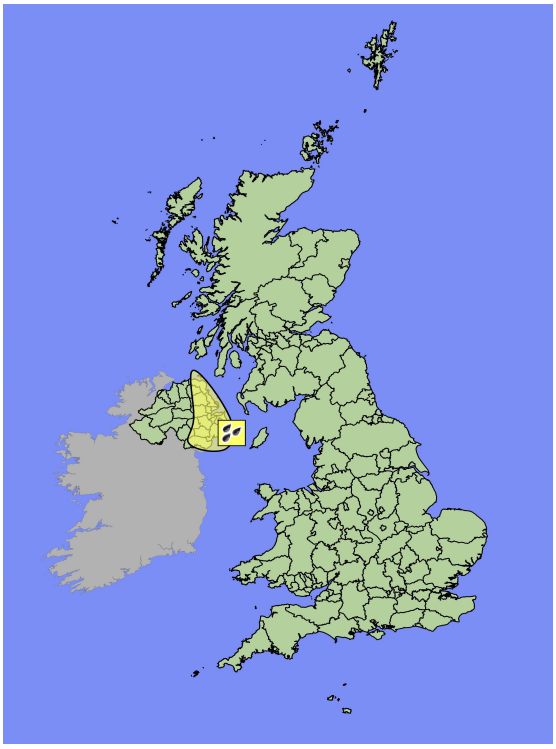
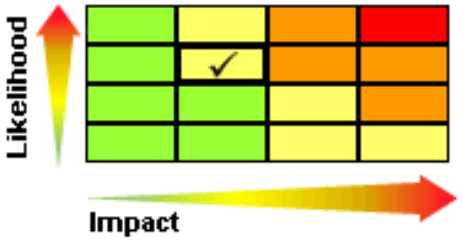
National Severe Weather Warning Service





Chief Forecasters Assessment
A deep depression currently developing near southwest Britain will move slowly northeastwards across the UK on Friday and Saturday, bringing another period of very unsettled weather to many regions. The associated frontal zones will bring an initial batch of heavy rain overnight Thursday into Friday, and after a brief gap, the rain will become slow-moving across Northern Ireland during Friday afternoon, with further heavy showers to follow during Saturday.
The largest rainfall totals are expected to be across the east of Northern Ireland with 15-30 mm falling quite widely and the possibility of 40-60 mm in the southeast.

The Met Office have issued a **Yellow Alert** of **Rain**

Valid from **12:00 on Fri, 15th Jun 2012** until **15:00 on Sat, 16th Jun 2012**

Outbreaks of rain will be heavy at times on Friday afternoon and evening and also for a time on Saturday. The heaviest rain will be over more eastern parts of Northern Ireland and will be accompanied by strong easterly winds.

The public should be aware of the risk of localised flooding.
